PORTABLE OXYMETER YM101

Measurement: SpO2%, heartbeat, PI (perfusion index)

The portable YM101 pulse (oxymeter), distributed by THE TELE System, monitors saturation and pulsation through the built-in sensor as well as indicating the perfusion index.

It can be used at home thanks to the ease of detection of SpO2 indices and heart rate. The YM101 oxymeter is normally used in patients with asthma, chronic bronchitis, COPD, pneumonia ecc. or simply to monitor the oxygenation of patients with fever, cough and shortness of breath (dyspnea).

Compliant with the European Medical device directive 93/42/EEC.

FEATURES

- Indications/measures: SpO2%, heart rate, PI (perfusion index), Bar Graph
- You can set an alarm to exceed the limits of: SpO2 and bpmPR
- Automatic shutdown after 8 sec. non-use
- Battery level display
- Display LED 1,5"
- Display brightness setting (3 levels)
- Dimensions: 57x30x31 mm
- Weight: 28 g

MEASUREMENT SPECIFICATIONS

SpO2

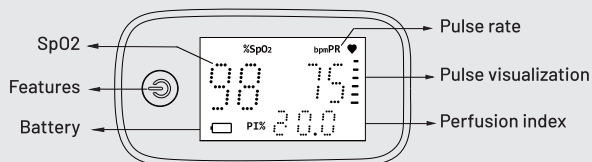

- Accuracy 70%~100%: ± 2 - 0% ~ 69%: ND
- Displayed range 30%~99%
- Accuracy $\pm 1\%$

Pulse rate (bpmPR)

- Accuracy 25~250 bpm: ± 3 digits
- Accuracy ± 1 bpm

ACCESSORIES

- Support cord
- 2 x Battery AAA (Optionals)
- User manual
- Certificate
